Academic Module

The Academic Module enables performance of all activities related to the **Academic** domain, such as:

- Creating Awards and mapping them to affiliating authority.
- Program management with different Awards.
- Generating academic batches and classes.
- Mapping of Session Plan, Term, Batches, and Program Execution Pattern for specific sessions.
- Tagging of Classes to Batches

Student Management

This is used for creating login IDs for students and their parent, configuring student profiles and student attributes as a major requirement. The student module is used to create a site master, university master, institute master, examination master. Along with this, it is used to configure student profile access, and map students to a group. The most important feature of this module is that it allows us to maintain a database of all the students belonging to the institute, thereby giving a 360-degree view of each student.

Enrollment/Registration

Student online registration process is used by the students for course registration. Students can register for courses through their self-service portal.

Steps for the online course registration process:

- 1. Click on Digital Campus icon
- 2. Click on Online Course Registration
- 3. Click on *Register* button
- 4. Click on Yes button
- 5. After registering for all the courses, click on Submit button

Timetable Module

The Timetable module, also known as class schedule, provides an overview of the activities planned for a class for the duration of an academic year/session. This module needs and is also responsible for the synchronization of the following resources or elements:

- Students
- Teachers/Faculty
- Rooms
- Subject
- Time slots or Periods

Approaches that are followed to generate timetable are

- **Direct Upload Timetable**: Direct upload of timetable helps institutes to set up timetable in scenarios where the timetable changes frequently and is not the same for all weeks.
- Weekly Timetable: Timetable is same for all the weeks in a semester and is set on semester basis in this approach.
- Auto Generate Timetable: Timetable is generated by the system, based on the constraints defined in the configuration for auto generation.
- **Student Selected Timetable**: Timetable is generated on the basis of subjects and faculties selected by the students.

Manage and Create Timetable:

Feedback Module

This module allows for capturing of feedback at session, course, and general (periodic survey) levels.

For customized feedback requirements, an e-form can be configured to accommodate specific questionnaire templates. The feedback computation logic then provides the ratings on the various parameters that the students or instructors have provided.

Based on the workflow, the feedback goes to the intended recipient (students, faculties etc) invites a response/action taken status and communicates this back to the requestor and/or group.

The details of each transaction in the Feedback cycle are available for view on the 360-degree analysis interface (Student 360) for the requestor student.

The Course-Faculty Feedback is conducted using TCSiON ERP System and feedback links can be scheduled to share with the users as per the pre-decided feedback schedule.

User can submit the Feedback through any one of the following modes:

- 1. Using the link provided in the Email sent to their official email.
- 2. TCSiON Self Service Portal (tcsion.com/Self Services).
- 3. Using mTop TCSiON App on smartphone.

The feedback is anonymous and once user have submitted the Feedback; it cannot be resubmitted.

Steps for submitting feedback:

Step 1: Open URL: www.tcsion.com/SelfServices and login.

Step 2: Click on Digital Campus On right side.

Step 3: Click on Submit Feedback.

Step 4: Search feedback and click on respective faculty submission button, one by one.

Step 5: Finally search feedback status submitted.

User can check feedback status by selecting Pending/Submitted.

Create Feedback:

Examination Module

Educational institutions use examinations and grading mechanisms to assess the students' knowledge, understanding, and application of the concepts in the various subjects taught as part of the course/program.

There are different ways of capturing scores and evaluating a student's performance, and these can be classified into two major streams.

- Capturing marks against the student/work (quantitative approach)
- Capturing grades against them (qualitative approach)

Examination Setup Master:

- Creation of examination setup master to capture and process marks.
- Setup and configure subject and result level grading.
